

Kaimla technology

Projects 2025

Document history

Created 8th April 2025.

Updated 11th April 2025 with additional information.

Intoduction

This document describes the state of the projects of Kaimla Technology and their concepts.

Shit as a Service

Website/API

Generates amusing images. Similar to the generator that generates bingus my beloved memes. Requires minimal technological investment. Prototype could be done in a day, MVP in a week.

Virtual Pet Playground

Website

Allows users to create their abominations. Monetization unclear – perhaps ads or donations?

Egg Tappist

iOS/Android app

Allows users to tap eggs to hatch them. Collect all hatched abominations.

Vibes Manager

iOS/Android app

Allows users to manage their vibes. Multi-media project, needs lots of ideas.

Agrogrilling

Browser game

Plant plants and animals, harvest and cook them. Mostly single-player, with some social elements. 3D graphics in a low-poly style. Prototype in a week, MVP 2 weeks.

Hovercraft

Windows/Linux game

Fly around in hovercrafts. Very amusing!

City Builder

Windows/Linux game

Build a city.
